

AI Rights

Acquire & Manage Rights To Use Scholarly Content Safely & Legally In AI Workflows

Turn your biggest compliance risk into competitive advantage. **AI Rights**, included with Article Galaxy Premium, eliminates the guesswork and legal risk of using generative AI tools with scientific content, giving your researchers instant clarity on what they can analyze and immediate access to acquire the rights they need.

Features Include:

1

Instant Rights Verification

Check AI usage permissions at the article level before downloading

2

One-Click Rights Acquisition

Secure AI Rights directly through Article Galaxy interface

3

Auditable Rights Record

Maintain a documented record of acquired permissions, keeping AI-driven research programs compliant

4

Publisher Coverage

Access rights from Wiley, Sage, Royal Society of Chemistry, and other major STM publishers

5

Perpetual, Company-Wide Rights

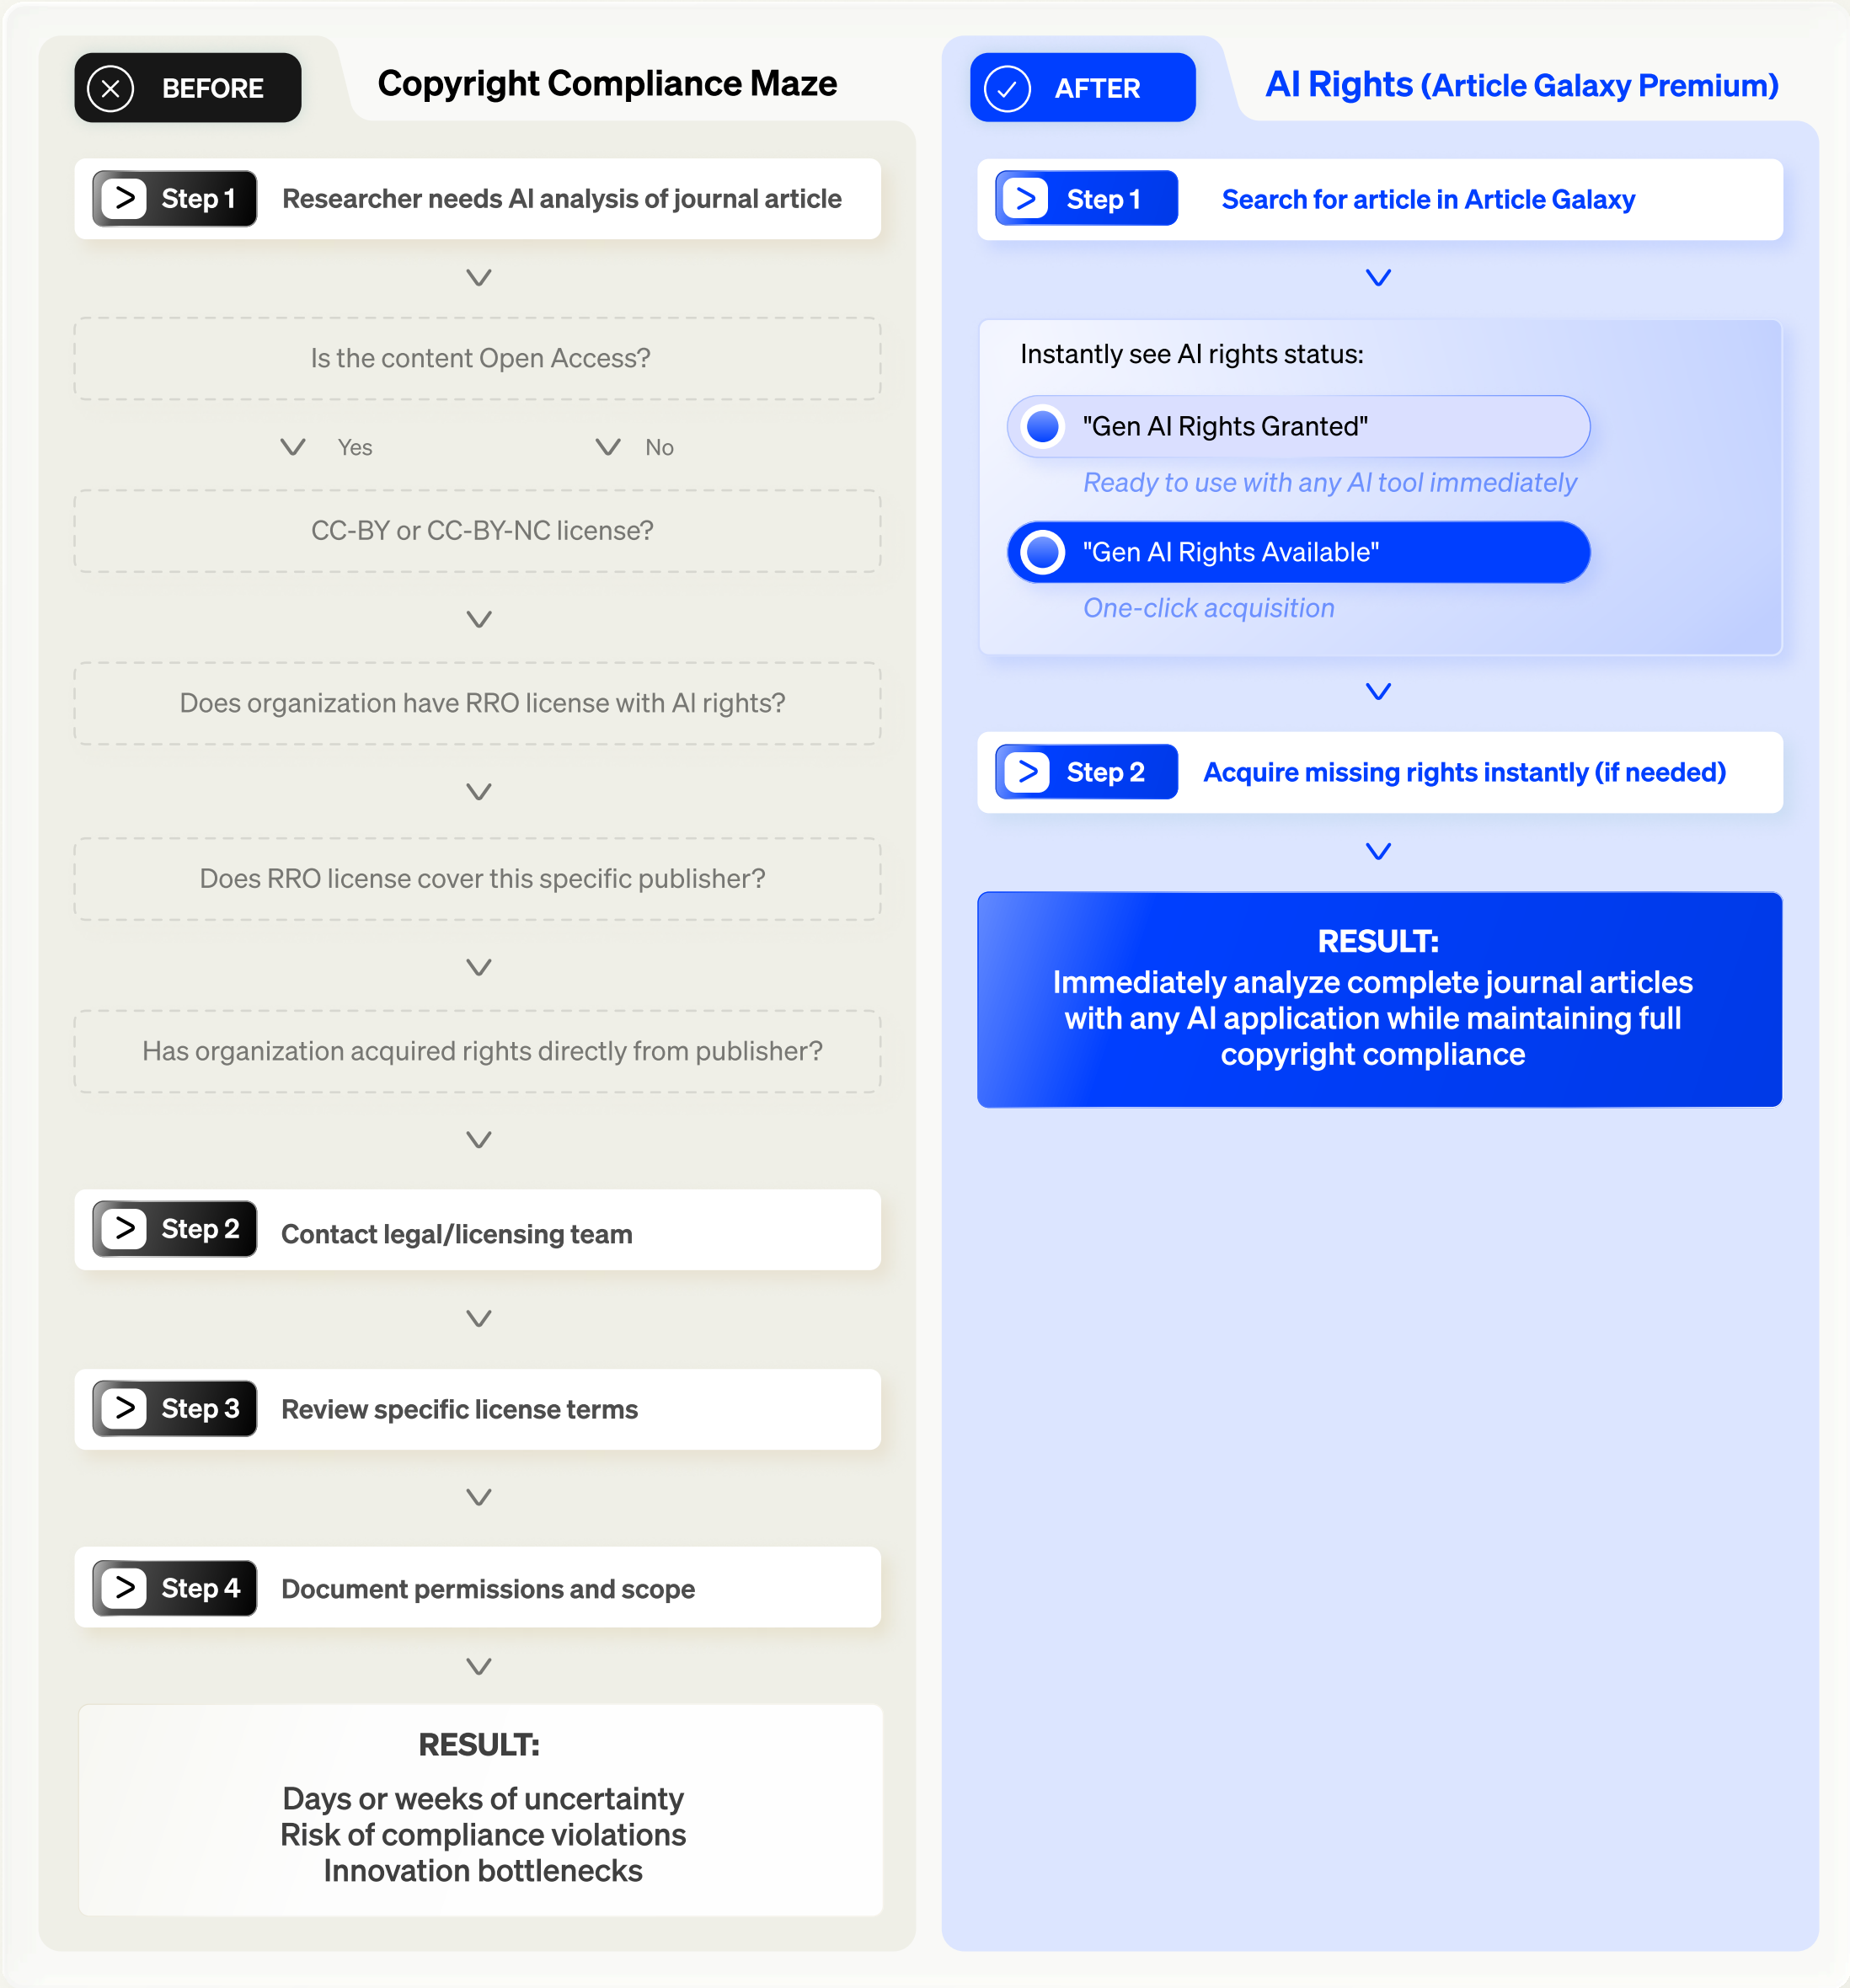

Pay once and own the rights indefinitely, with no recurring fees

Eliminate Legal Friction, Enable Faster Innovation

76% of researchers now use AI tools in their workflows and want to analyze scientific content with these tools. But here's the problem: most publishers restrict AI use on their content, with no straightforward way to acquire the necessary permissions. Users face a compliance maze, unable to determine what they're legally allowed to do with the content they need most.

AI Rights, part of every Article Galaxy Premium plan, cuts through this complexity. Users instantly see what AI permissions they already have for any journal article, whether through Open Access licenses, RRO agreements (CCC & CLA), or direct publisher relationships. When rights don't exist, they can acquire them directly through the Article Galaxy interface.

The Result: Compliance certainty that enables, rather than restricts, innovation.

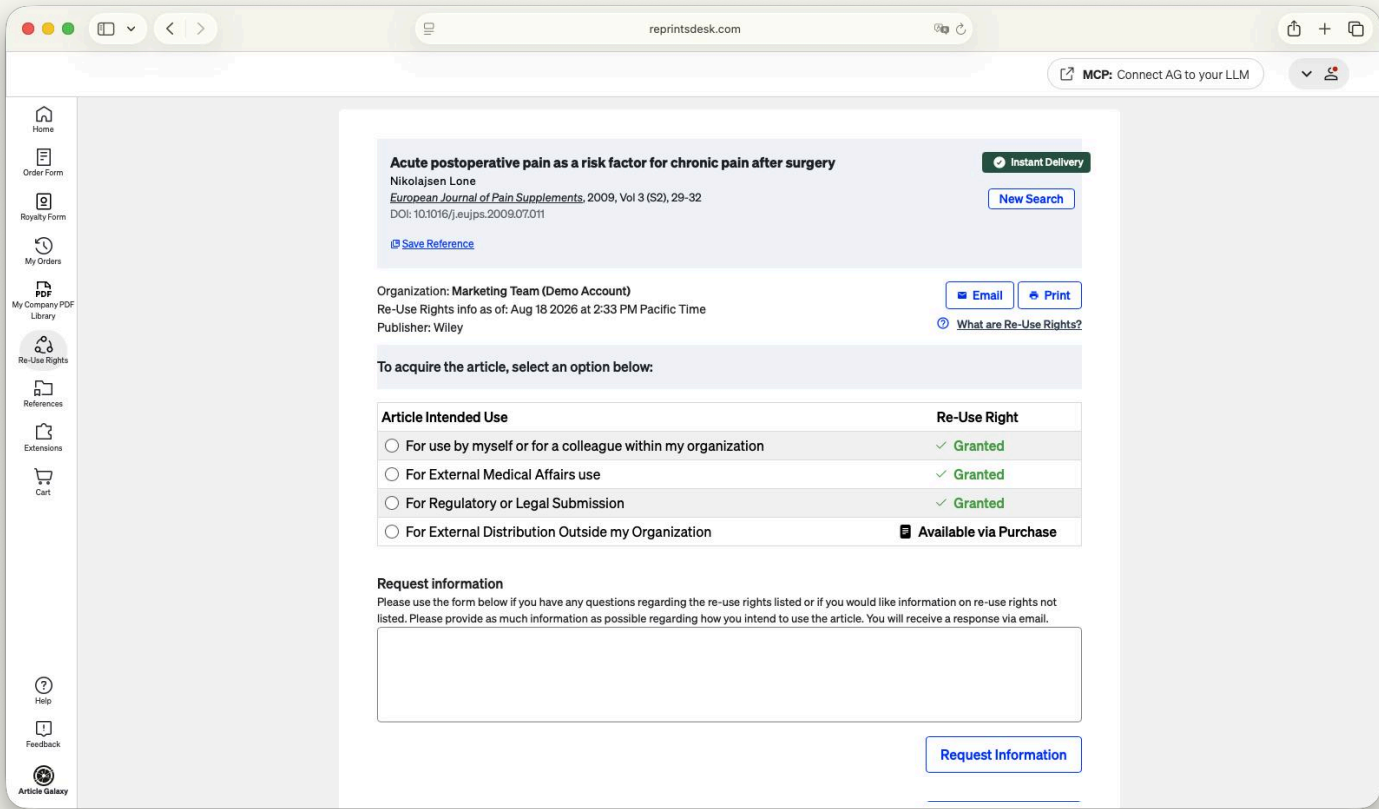

Advanced Capabilities

Publisher Direct Relationships

Direct licensing partnerships with major publishers representing over 15% of non-Open Access journal content, and continuing to grow the largest commercially available AI rights coverage in STM publishing.

Intelligent Rights Detection

Automatically identifies existing AI permissions based on Open Access license types and through your publisher subscriptions, RRO licenses (CCC/CLA), and previous purchases. No more manual rights checking or compliance uncertainty.

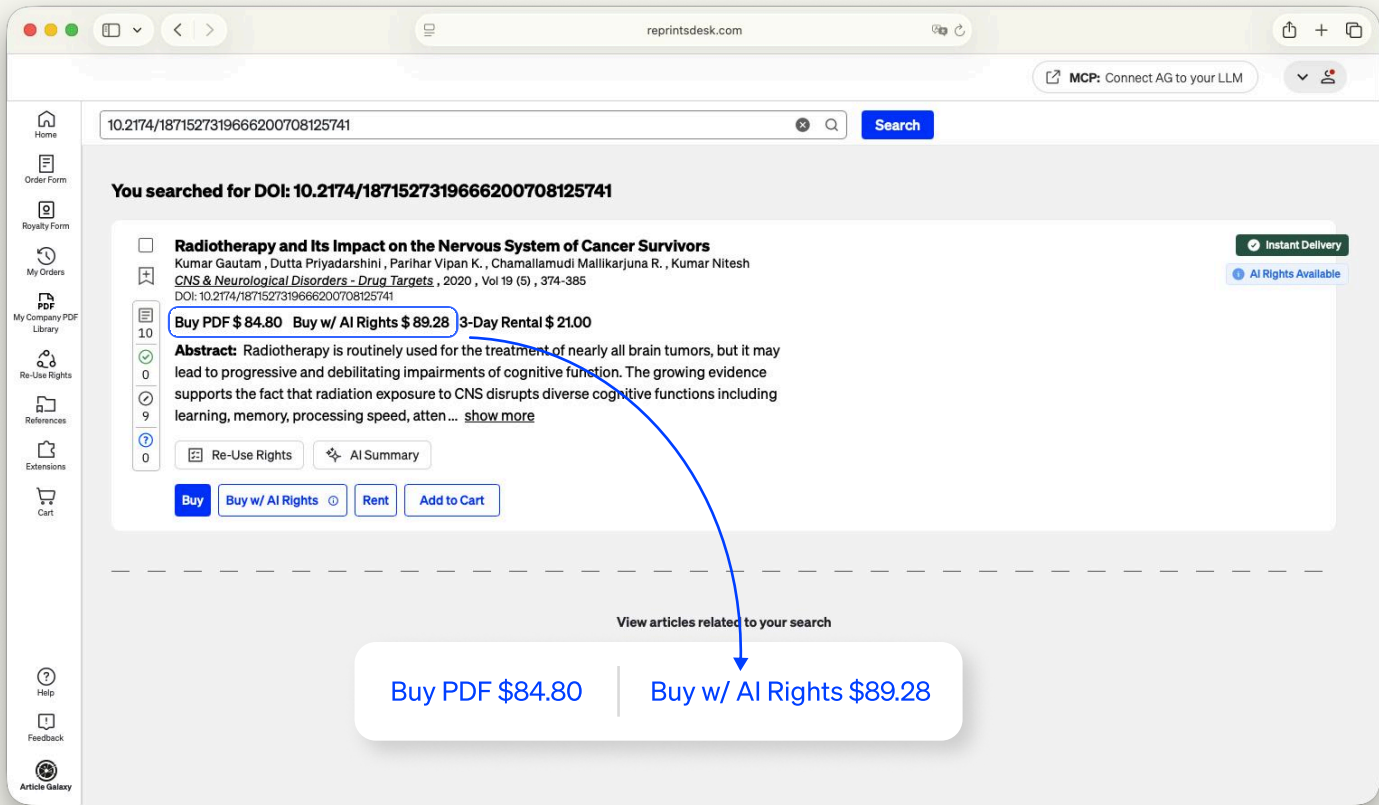

Transparent Pricing Model

Transparent, predictable pricing with no hidden costs, providing assured compliance and materially reduced risk.

Future-Proof Foundation

As publishers expand AI rights coverage and new tools emerge, your existing rights travel with you. Built for the AI-first research environment of tomorrow.

Researchers Need AI. Publishers Demand Compliance. We Bridge The Gap.

Imagine your researchers applying AI's full potential to scientific literature with zero copyright friction.
