

Article Galaxy Admin Analytics

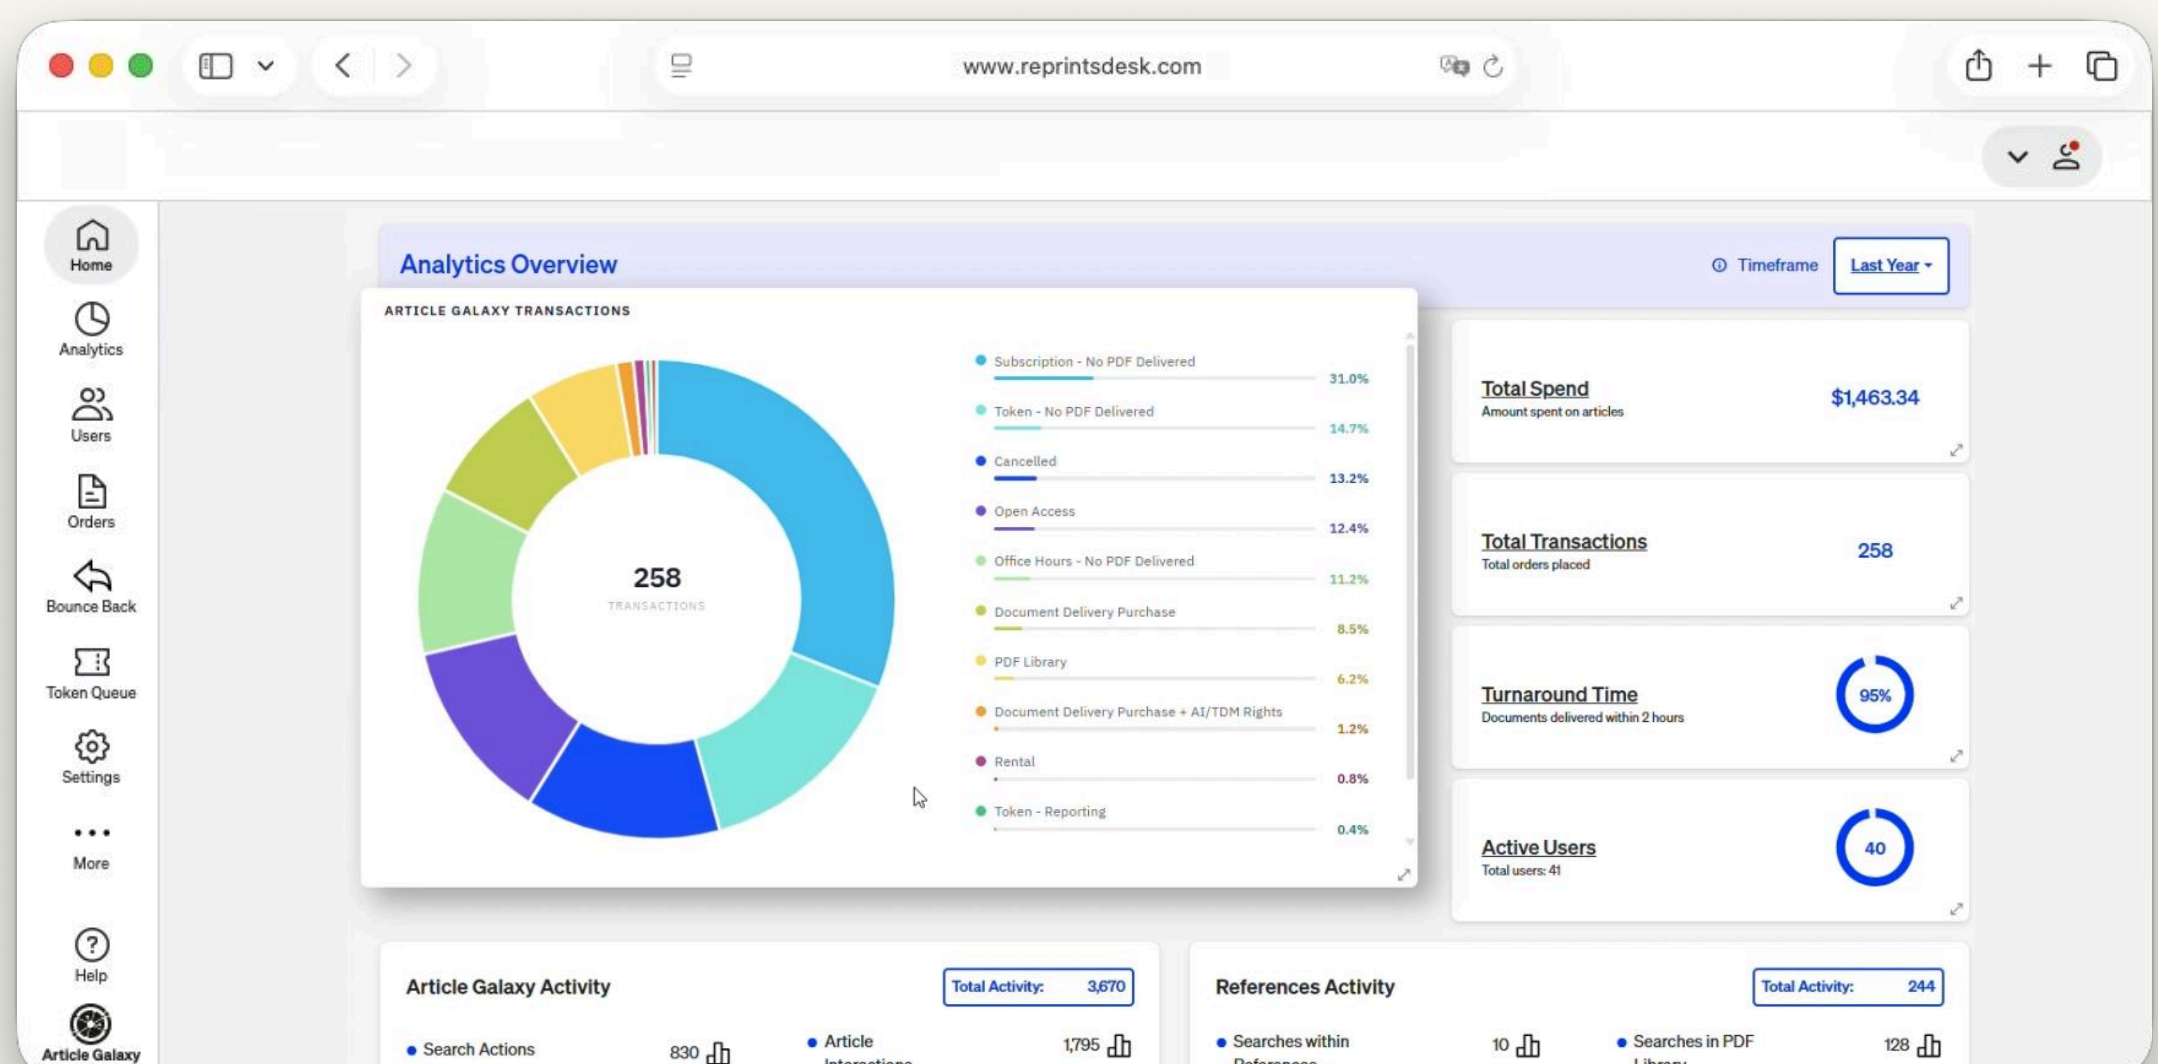

From Data To Decisions

Research Solutions has rebuilt the Article Galaxy administrative portal around how administrators actually work. Admins rely on the panel to manage how users order and access articles, and they use it to understand the value and return on investment Article Galaxy provides. Now the data behind that is easier to see and act on.

Reporting & Impact Analysis

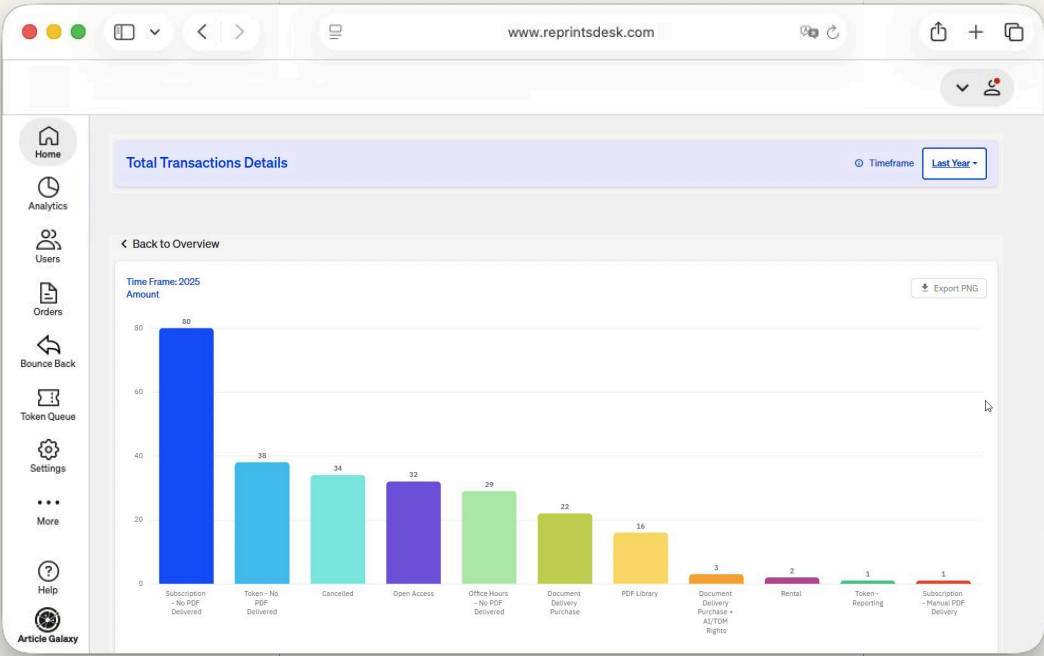

Getting clear visibility into activity and usage trends has been a persistent challenge for administrators. The Admin Analytics view gives you insight into Article Galaxy's impact on your organization. Review total spend, order activity, active users, and more at a glance, and set the time frame you need.

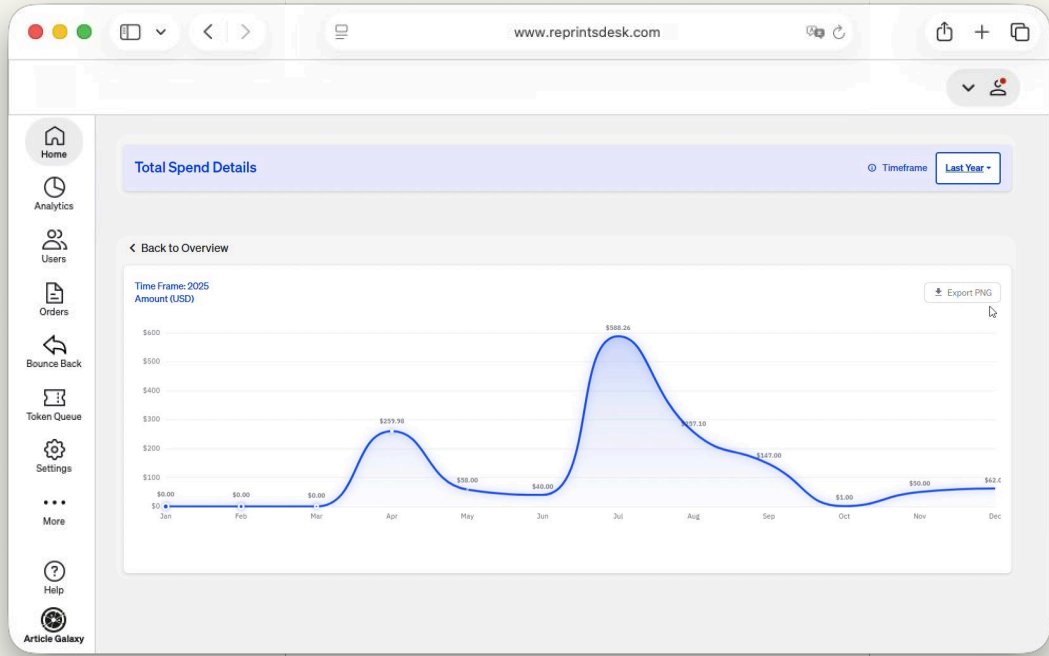

Interactive Visualization & Analytics

One of the primary things we heard from our customers was the need for an easy way to review activity and trends in usage. You can still download an Excel file with all the raw data, but now you can also interact with and visualize data directly in the admin panel. See the examples below.

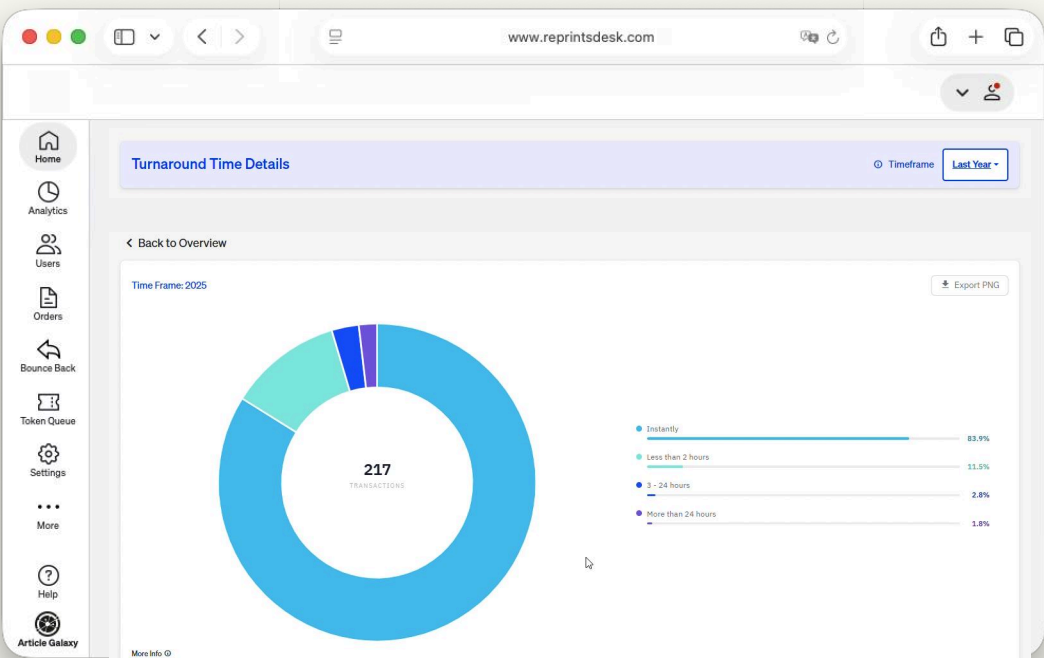

Review number of transactions by type to see how users are sourcing their research:

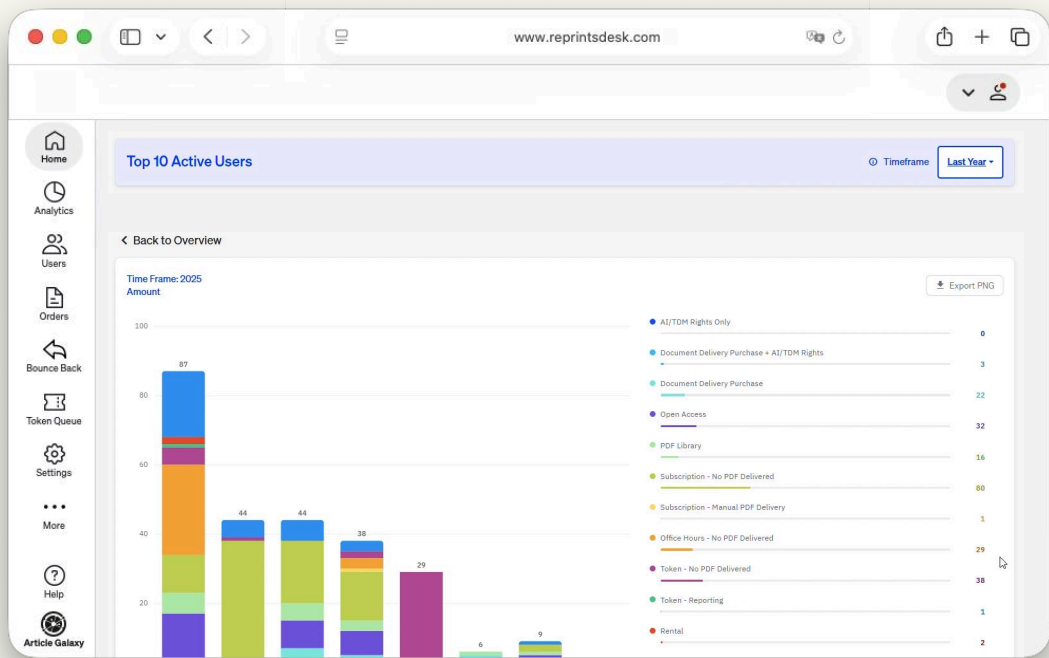

Easily keep track of order activity and article spend over time:

Review how quickly Article Galaxy delivers articles to users:

Monitor and track your most active users:

Export any chart as an image with one click to drop a figure straight into a stakeholder update.
